Sequence data raw format: FASTQ

- Sequence is given per char
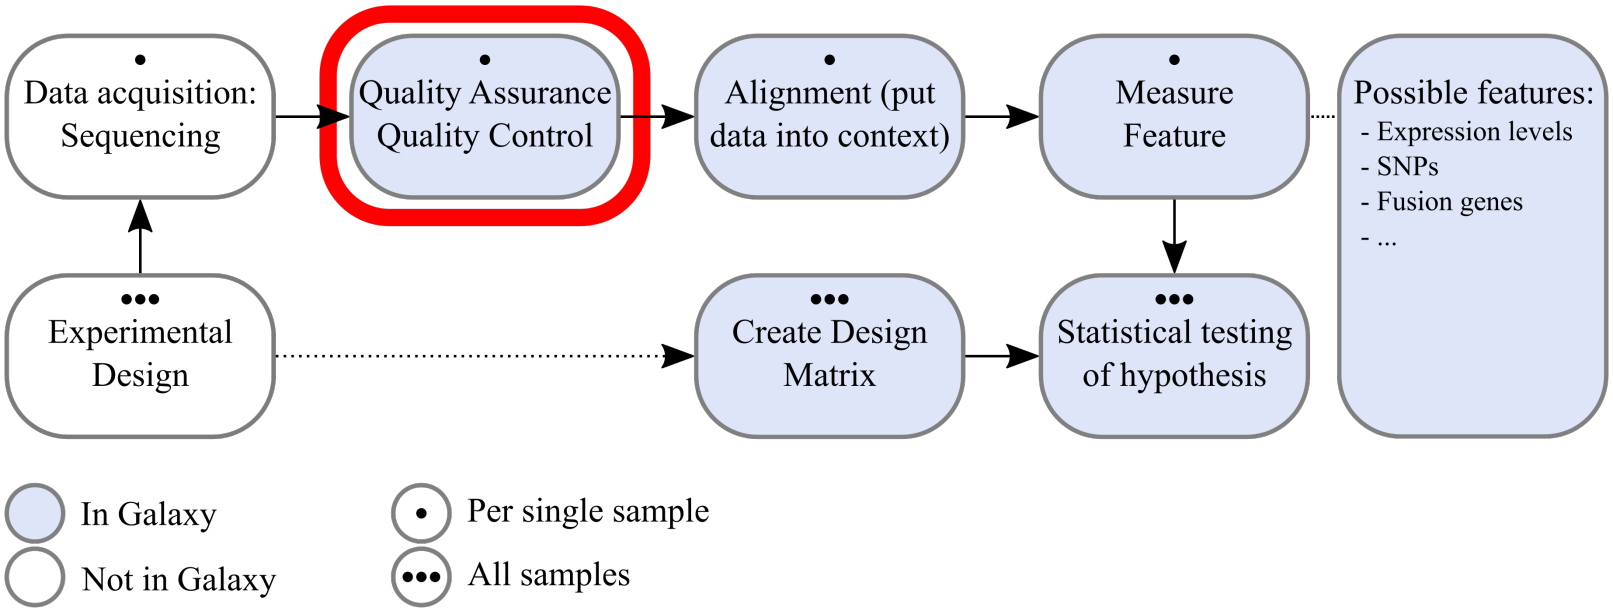
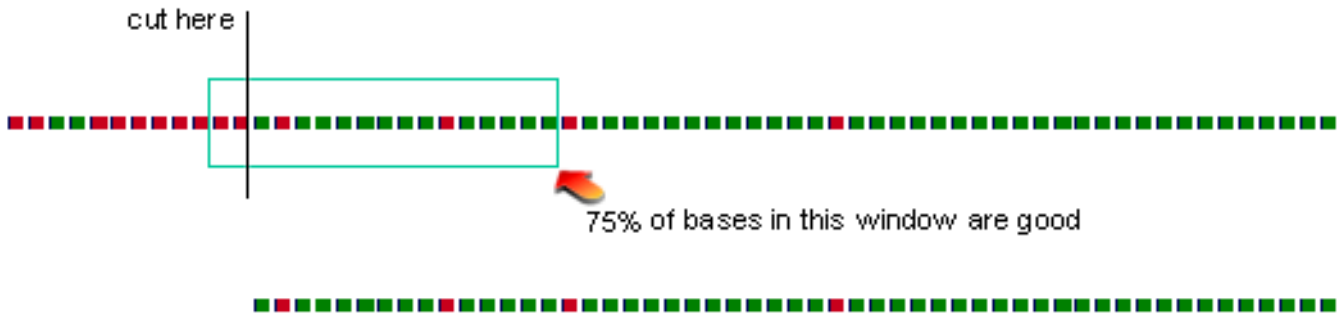
  - N means *sequencer doesn't know*
- Quality is encoded as a char
  - reflects probability of being called correctly
- Different encodings
  - `http://en.wikipedia.org/wiki/FASTQ_format#Encoding`
- RNA-Seq: data usually unstranded, but stranded does exist

RNA-Seq experiment workflow

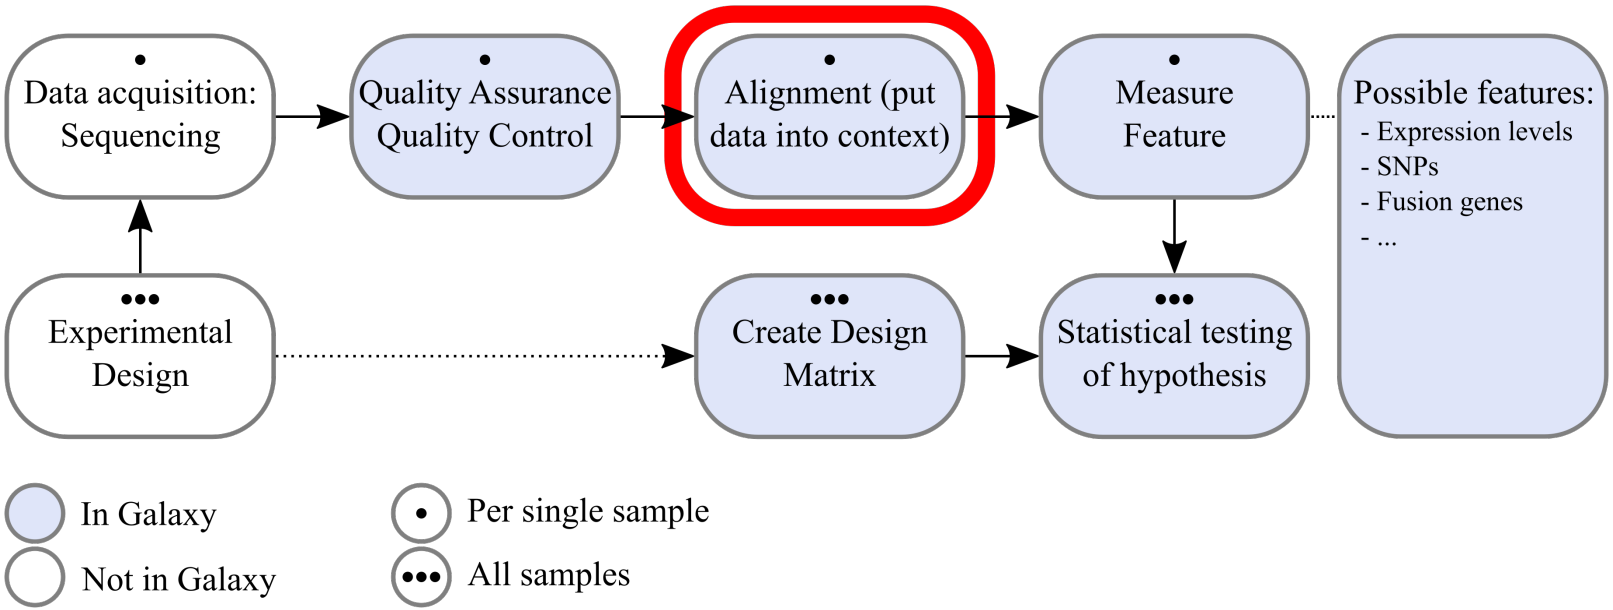


Quality assurance & quality control

- Adapter contamination
- Trim low quality bases from the ends
  - Be aware: in paired end data reads are linked by position in file
  - Proceed with trimmed reads



RNA-Seq experiment workflow

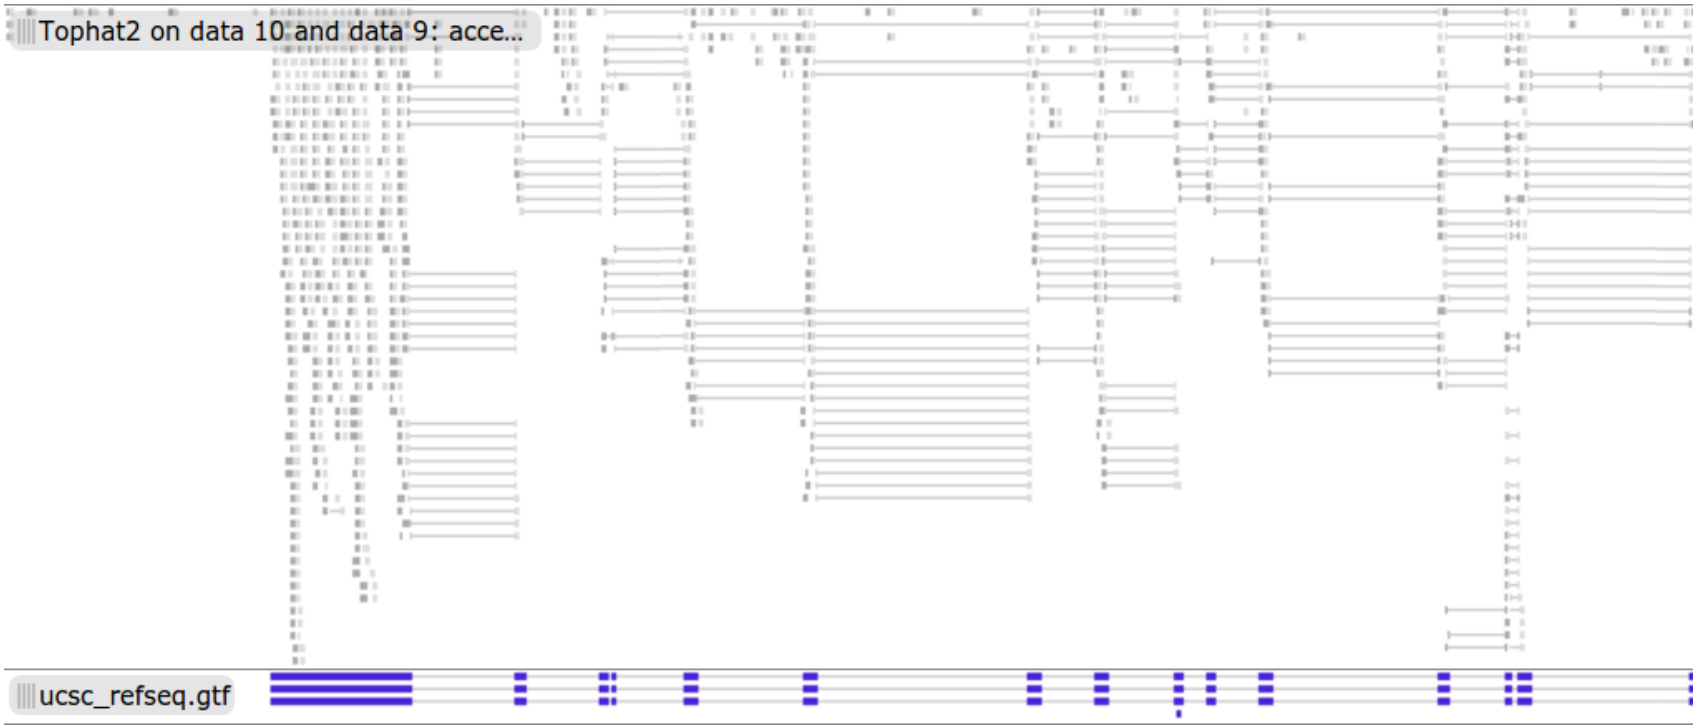


Single Nucleotide Polymorphisms in RNA-Seq

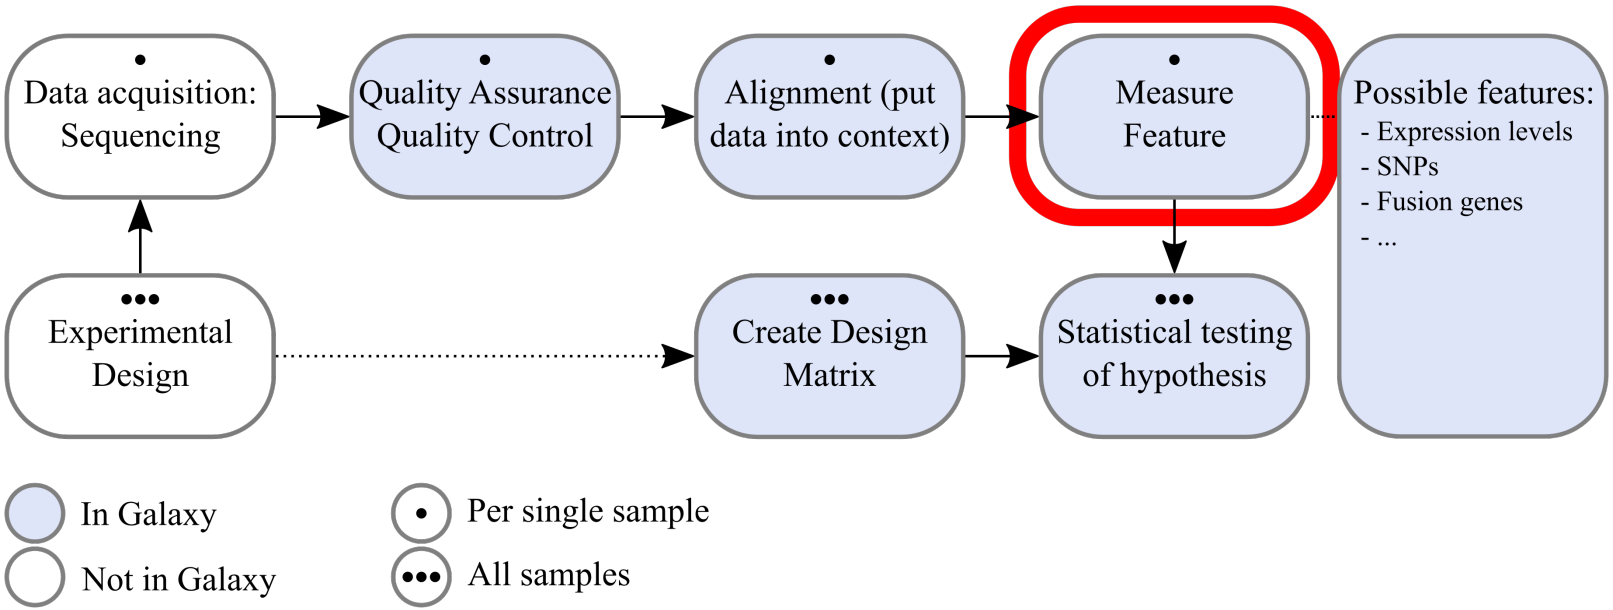
Covered examples during hands-on

- Biological interpretation: map reads to reference genome
- mRNA: spliced
  - Aligning: low/no penalty for gaps near introns
- mRNA: expressed
  - Only reads in expressed regions
- Requires specialized (slower) aligners

Typical RNA-Seq alignment



RNA-Seq experiment workflow

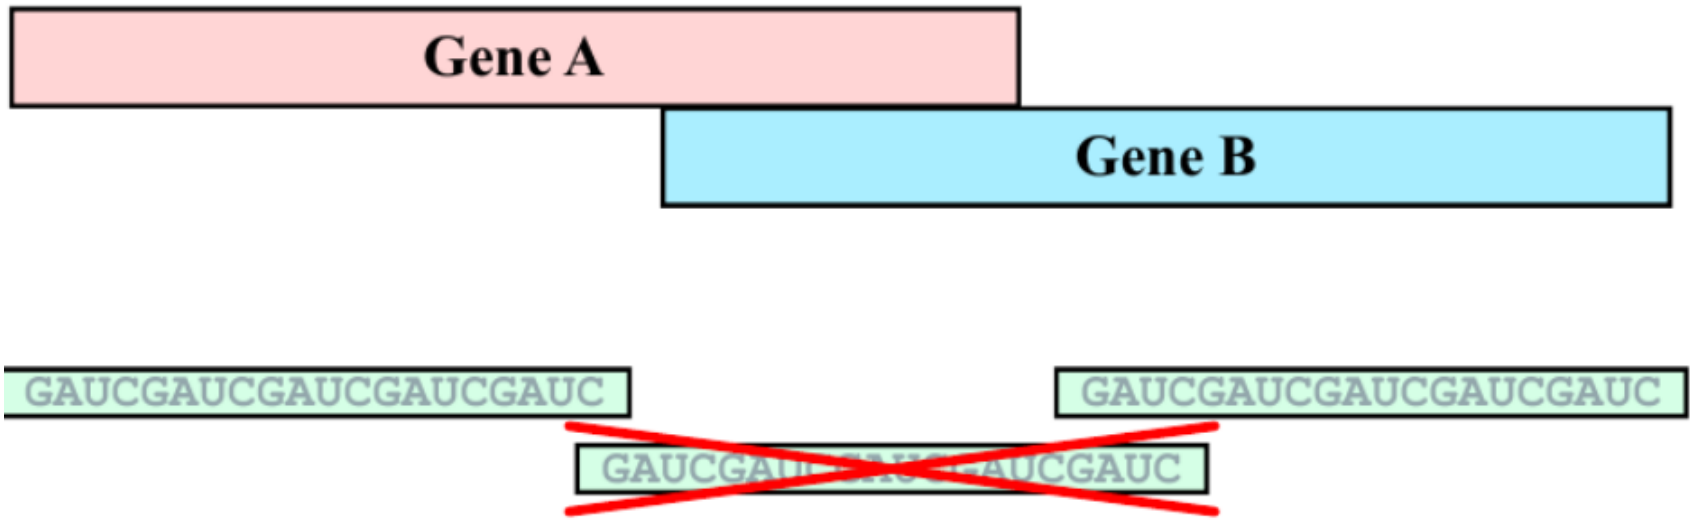


What information does RNA-Seq contain?

- Expression levels
  - Gene level
  - Transcript level Measure expression levels in RNA-Seq data(splice variants)
- Variants
  - SNPs, SNVs
  - Structural variants: fusion gene, conjoined genes, deletions
- Non-reference transcripts
  - Novel genes
  - Viral/bacterial RNA
  - Insertions
- Theoretically
  - Allele specific expression
  - RNA-editting
  - Intron retention time, RNA-stability

Measure expression levels in RNA-Seq

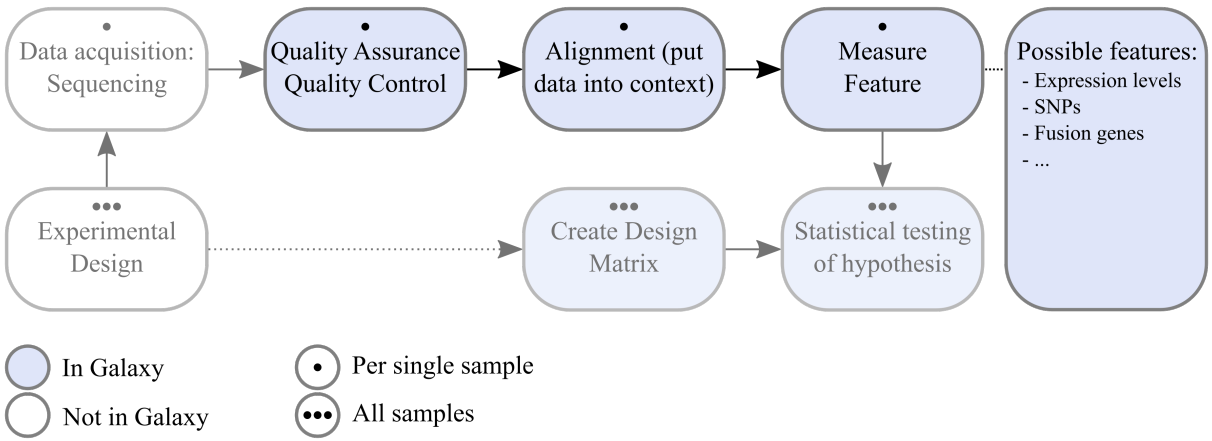
- Basic principle: count aligned reads in alignment
- Statistical independence (ensure a read belongs to **only** that gene)
  - Skip reads aligned to multiple places ('multi-mappers')
  - Skip overlapping gene annotations
  - Only look in exons



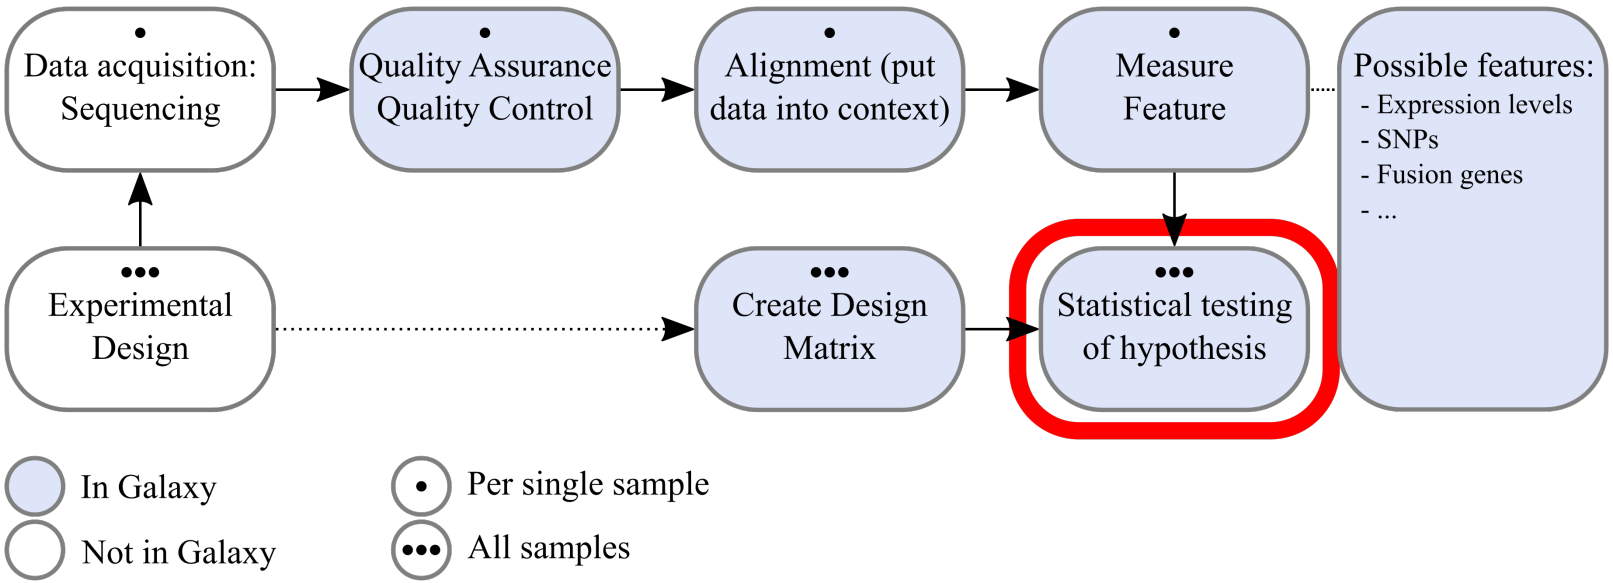
Practical part 1

From raw data to expression levels

- Artificial small dataset
- Start galaxy!

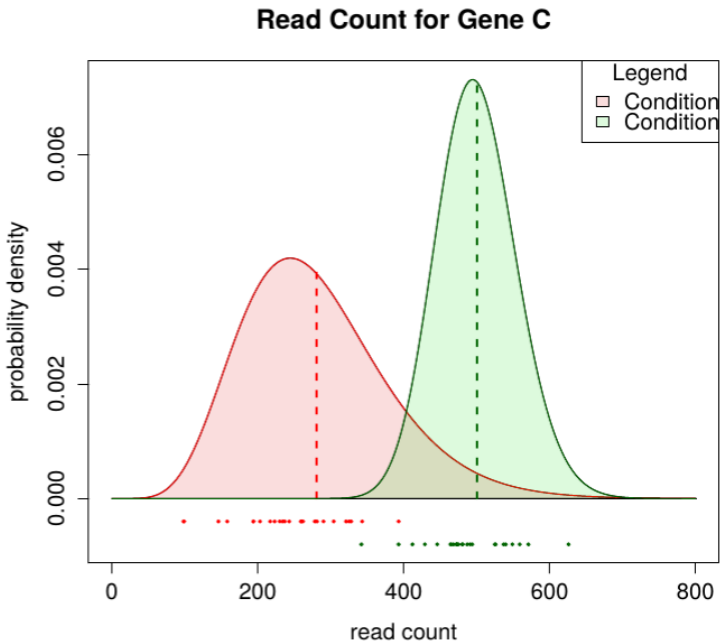


RNA-Seq experiment workflow



Differential gene expression

- RNA-Seq: count-data
- Not normal-distributed, negative binomial
  - Read counts of 1.45 and -42 don't exist!
  - Special tests for count data

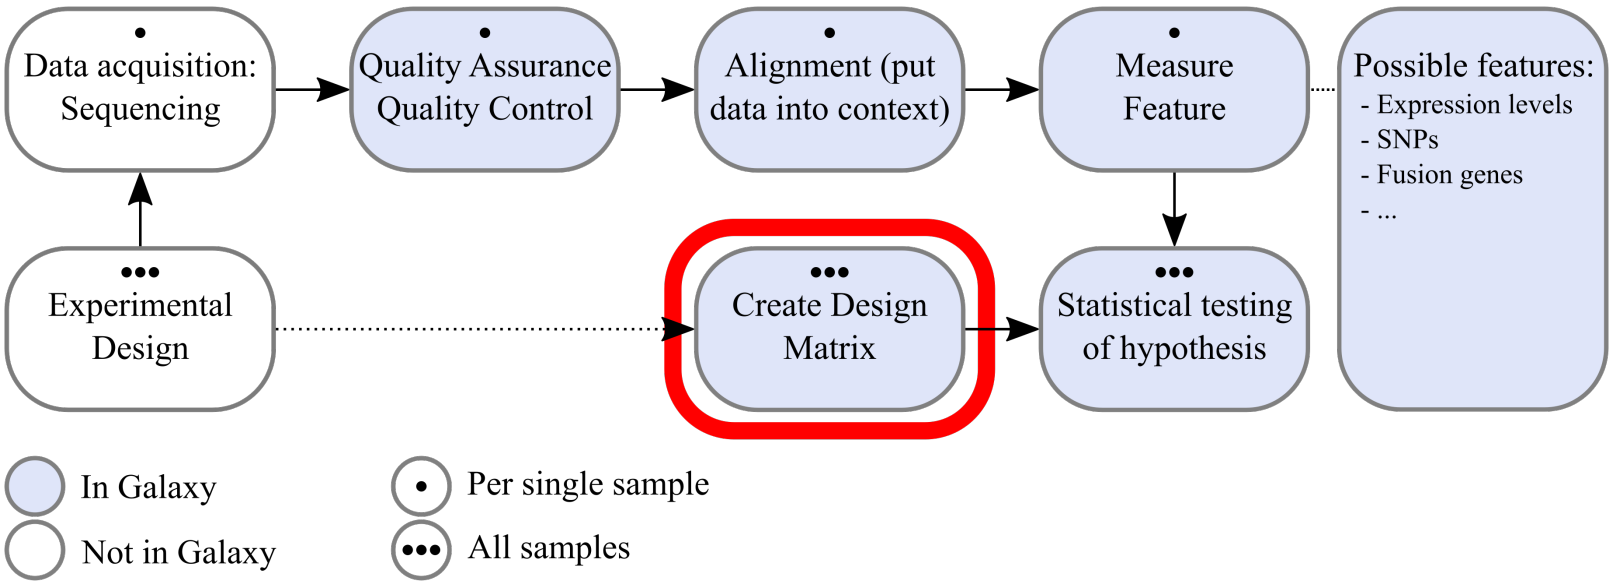


Expression matrix

- Rows: one candidate gene per row
- Columns: read counts, per gene, per sample

	Sample-1	Sample-2	Sample-3	Sample-4	Sample-5	Sample-6	Sample-7	Sample-8
Gene-1	112	4	10	21	8	16	584	59
Gene-2	173	10	39	38	12	24	949	157
Gene-3	152	123	177	155	113	355	536	673
Gene-4	46	36	132	49	52	124	206	366
Gene-5	51	19	40	27	20	51	101	282
Gene-6	23	28	34	13	7	12	47	128
Gene-7	48	105	125	56	49	68	254	408
Gene-22,000	38	1155	68	60	10	43	155	381

RNA-Seq experiment workflow



Design matrix

- Rows: one sample per row
- Columns: mutually exclusive conditions

	Condition
Sample-1	tumor
Sample-2	tumor
Sample-3	tumor
Sample-4	tumor
Sample-5	normal
Sample-6	normal
Sample-7	normal
Sample-8	normal

Biological question

- Biological question (difference between conditions)

	Condition
Sample-1	tumor
Sample-2	tumor
Sample-3	tumor
Sample-4	tumor
Sample-5	normal
Sample-6	normal
Sample-7	normal
Sample-8	normal

Design matrix

	Sample-1	Sample-2	Sample-3	Sample-4	Sample-5	Sample-6	Sample-7	Sample-8
Gene-1	112	4	10	21	8	16	584	59
Gene-2	173	10	39	38	12	24	949	157
Gene-3	152	123	177	155	113	355	536	673
Gene-4	46	36	132	49	52	124	206	366
Gene-5	51	19	40	27	20	51	101	282
Gene-6	23	28	34	13	7	12	47	128
Gene-7	48	105	125	56	49	68	254	408
Gene-22,000	38	1155	68	60	10	43	155	381

Expression matrix

Biological replicates

- 2 class problem (tumor normal)
  - Scenario 1
    - Sequence 100M reads
    - 3 replicates
    - 100M * 3 = 300M reads
  - Scenario 2
    - Sequence 10M reads
    - 30 replicates
    - 10M * 30 = 300M reads
- Question: "*more sequence or more replication?*"

Practical part 2: more sequence or more replication?

- `http://www.ncbi.nlm.nih.gov/pubmed/24319002`
  - MCF7 cell line
  - 2 conditions: treated and untreated with hormone
  - n^o DE genes reflects statistical power
- Practical: complete table:

Replicates	Seq. depth (million)	DE genes
0	0	0
7	5	**?**
7	10	**?**
7	30	**?**
5	30	**?**

Wrap up

Wrap up

- `http://bioinformatics.oxfordjournals.org/content/30/3/301.long`
  - "*In the human cell line MCF7, adding more sequencing depth after 10M reads gives diminishing returns on power to detect DE genes*"
  - Using 5 or 7 replicates still makes a difference
